VERSION 1.1 · UPDATED OCTOBER 2026

01

GENERAL REQUIREMENTS

This technical rider is intended to ensure a reliable and professional performance. Reasonable substitutions may be accepted with advance approval. Please confirm equipment substitutions prior to the event.

02

DJ EQUIPMENT

☐ PREFERRED	**2 × Pioneer DJ CDJ-3000** **1 × Pioneer DJ DJM-S11**
ALTERNATE 1	**2 × Pioneer DJ CDJ-3000 + DJM-A9**
ALTERNATE 2	**2 × Pioneer DJ CDJ-3000 + DJM-S9**
FALLBACK	**Pioneer DJ DDJ-REV7** Controller. Advance approval only.
FALLBACK	**Pioneer DJ DDJ-1000SRT** Controller. Advance approval only.

Approved alternatives are listed in order of preference. Controller substitutions require advance approval.

> **All equipment must be fully functional, professionally maintained, and operating on stable/current firmware.**

03

MEDIA & PERFORMANCE WORKFLOW

Artist performs primarily with Serato DJ from the artist's performance laptop, unless otherwise advanced.

- ☐ **With the preferred DJM-S11:** the CDJ-3000s connect by USB directly to the mixer.
- ☐ **With mixers that don't support that connection (e.g. DJM-S9):** the CDJ-3000s run in HID mode, connected to the laptop. Artist usually brings the required USB dongle/hub; a venue-provided one is also fine.
- ☐ **Backup option:** Rekordbox-prepared USB media on CDJ systems.

Please ensure the following are fully operational:

- ☐ USB ports
- ☐ Touchscreens
- ☐ Cue/play controls
- ☐ Jog wheels
- ☐ Pitch controls
- ☐ Audio outputs
- ☐ Pro DJ Link/network functionality, where applicable

04

DJ BOOTH

- ☐ Stable professional DJ table/booth
- ☐ Comfortable standing height
- ☐ Sufficient width and depth for the complete DJ system
- ☐ Equipment centered and level
- ☐ Clean working surface
- ☐ Adequate ventilation
- ☐ Protection from guest traffic and beverages
- ☐ Outdoor setups protected from direct sunlight, rain, and excessive heat

> **No beverages shall be placed on DJ equipment or the performance surface.**

05

BOOTH MONITORING

Two professional powered booth monitors preferred; one is acceptable. Monitors (or an equivalent monitoring system) positioned within comfortable reach of the DJ.

Preferred:

- ☐ Independent level control
- ☐ Clear full-range signal
- ☐ No excessive latency
- ☐ Appropriate output for room/stage size

Dedicated booth monitoring is required for club, concert, and large-event environments and strongly preferred for all other events.

06

HOUSE PA

Professional sound reinforcement appropriate for the venue size and audience capacity, capable of clean full-range reproduction at performance level without audible clipping, distortion, or excessive limiting.

- ☐ Balanced stereo feed from DJ mixer
- ☐ System installed, tested, and operational prior to performance

07

POWER

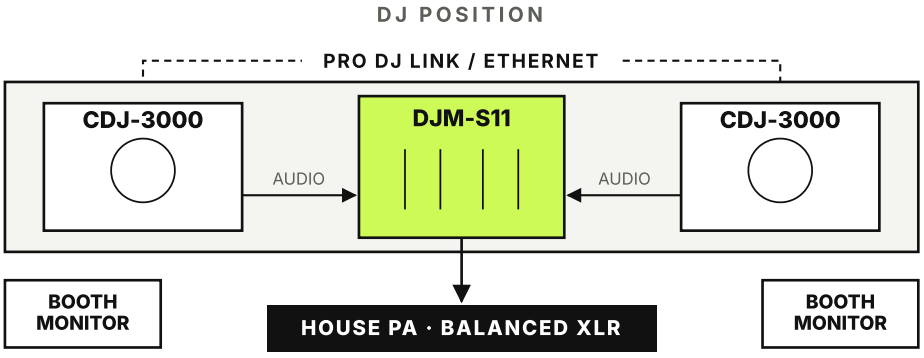

- ☐ Clean, grounded AC power
- ☐ Appropriate power distribution for all DJ equipment
- ☐ Avoid sharing DJ circuits with high-current lighting, motors, heaters, fog machines, or effects whenever possible

08

CONNECTIONS / SIGNAL

Preferred CDJ setup

- ☐ 2 × CDJ-3000 connected to mixer
- ☐ Pro DJ Link / Ethernet between players where supported
- ☐ Appropriate RCA or digital audio cabling
- ☐ Balanced XLR master output to house system

PREFERRED LAYOUT · TOP VIEW · NOT TO SCALE

09

SOUND CHECK / ACCESS

DJ system should be installed, powered, connected, and tested prior to artist arrival whenever possible.

Artist or designated representative should have access to the DJ booth before performance for media verification and line check.

For larger events, please provide approximately 15 minutes of unobstructed booth access prior to performance when scheduling permits.

10

EQUIPMENT SUBSTITUTIONS

We understand that inventory varies by venue and market. Equivalent substitutions can often be accommodated, but all substitutions should be confirmed in advance.

Do not assume unlisted DJ equipment is acceptable without approval.
